SOFTWARE ENGINEERING MASTER STUDENT

Software Engineering Master's student at Politecnico di Torino focused on backend systems, with experience shipping production API surfaces and LLM-based tooling. Lead a cross-functional team as a finalist in a national innovation challenge with Lavazza.

EDUCATION

Politecnico di Torino

M.Sc. in Software Engineering

Turin, Italy

Sep 2025 – Present

- Relevant coursework: operating systems, system programming, software design and architectures; in progress: distributed programming, cybersecurity, containerization & orchestration technologies, agile software engineering

Politecnico di Torino

B.Sc. in Computer Engineering (Final Grade: 93/110)

Turin, Italy

Oct 2022 – Sep 2025

- Relevant coursework: algorithms and data structures, complexity analysis, object oriented programming, databases

TECHNICAL SKILLS

Languages	: Python, Rust, C, JavaScript, Java, C#, risc assemblies
Frameworks	: FastAPI, .NET, React, Node.js, Express, N8N
DevOps	: Docker, Kubernetes, GitHub Actions, CI/CD Pipelines, Linux/Bash
Databases	: Relational (SQLite, PostgreSQL, Microsoft SQL server), NoSQL (MongoDB)
Languages	: Italian (Native), English (C1)

EXPERIENCE & AWARDS

AI Software Engineer Intern

Assist S.P.A.

Mar 2025 – Jul 2025

Beinasco, Italy

- Designed and built an LLM-based chatbot for customer support, expected to save Assist's support team >150 person-hours/week
- Designed and implemented REST API surfaces (C#, .NET) integrating OpenAI's o3-mini model, cutting inference token costs by ~45% versus the o3 baseline while meeting response-quality requirements
- Coordinated GDPR-compliant agentic workflows in N8N, automating document review for an estimated 150–300 customer requests/week

Finalist

Ifab 4 Next Generation Talents (Lavazza)

Mar 2026 – Jun 2026

Turin / Bologna, Italy

- Designed BeanSight, a dashboard aggregating 7 public data sources to deliver descriptive market and climate intelligence for coffee supply chains across Brazil and Vietnam, covering up to 20 years of historical data
- Led a cross-functional team of 6 students from different technical backgrounds, translating technical constraints from/for Lavazza's business and IT stakeholders and demoing the platform, which stakeholders identified as a solution to their reliance on email- and spreadsheet-based workflows
- Advanced to the final round of Ifab 4 Next Generation Talents, competing against teams from 5 other companies

PROJECTS

GeoRust

Rust, Tokio, WebSocket

[Source Code](#)

- Built an asynchronous, client-server application in Rust (Tokio) to track clients' real-time positions.
- Benchmarked on consumer-grade desktop hardware with 1 server handling 1,000 concurrent client connections, peaking at just 2.5% CPU utilization.

EZShop

Python, FastAPI, SQLite

[Source Code](#)

- Built a FastAPI backend REST server with a relational (SQLite) database for a small market's order and inventory system, developed using the Waterfall model.
- Achieved 96% test coverage across ~650 unit, integration, and end-to-end tests.

Preventive Maintenance Tracker

Python, FastAPI, PostgreSQL, Streamlit

Private Repository

- Designed and deployed a preventive maintenance platform for an EV charger manufacturer's service team, scheduling interventions, emailing technicians ahead of deadlines, and tracking completion.
- Independently deployed and managed production infrastructure: Dockerized services on a Hetzner VPS, with DNS and domain management via Cloudflare and Aruba.
- Built for the company's ~200 charging sites; received positive feedback from employees as a central alternative to scattered spreadsheet- and email-based tracking, though not yet formally adopted.
