

SOFTWARE ENGINEERING MASTER STUDENT

Dedicated Software Engineering Master’s student at Politecnico di Torino with a strong focus on backend engineering, system architecture, and code optimization. Specializing in enterprise-level software design, information systems, and system programming to build robust, high-performance applications. Adept at bridging technical implementation with real-world problem-solving, demonstrated through impactful AI development internships and collaborative cross-functional projects.

TECHNICAL SKILLS

Languages	: Python, Rust, C, ARM assembly, RV assembly, Java, C#, Go, JavaScript
Frameworks	: DotNet, React, Node.js, Express, FastAPI, N8N
DevOps & DBs	: Docker, Kubernetes, GitHub Actions, CI/CD Pipelines, Linux/Bash, SQLite, MongoDB
Spoken	: Italian (Native), English (C1)

EXPERIENCE & AWARDS

AI Software Engineer Intern Assist S.P.A.	Mar 2025 – Jul 2025 Beinasco, Italy
- Contributed to the design and implementation of an LLM-based chatbot for customer support. - Designed and implemented REST API surfaces for agent tooling using the DotNet framework in C#. - Coordinated agentic workflows using N8N, enabling the agent to review the customer’s documents.	
Finalist Ifab 4 Next Generation Talents (Lavazza)	Mar 2026 – Jun 2026 Turin / Bologna, Italy
- Designed BeanSight, a market and climate intelligence platform to support coffee supply chain decisions. - Collaborated directly with Lavazza stakeholders and IT specialists to evaluate technical details. - Lead my team, coordinating a group of students coming from different technical backgrounds.	

EDUCATION

Politecnico di Torino Master’s Degree in Software Engineering	Turin, Italy Sep 2025 – Present
Relevant coursework: computer architectures, software engineering, cybersecurity	
Politecnico di Torino Bachelor’s Degree in Computer Engineering (Final Grade: 93/110)	Turin, Italy Oct 2022 – Sep 2025
Relevant coursework: algorithms and data structures, object oriented programming, databases	

PROJECTS

GeoRust	Rust, Tokio, WebSocket	Source Code
- Asynchronous client-server application written in Rust to keep track of clients’ positions. - Focused heavily on asynchronous execution and overall code performance optimization.		
EZShop	Python, FastAPI, SQLite	Source Code
- A FastAPI backend REST server designed for a small market. - Developed through practical application of the Waterfall model.		
Lordran Express	React, TypeScript, NodeJS	Source Code
Interactive web minigame developed for the Web Applications I university exam.
